

SHEKHAR KASHYAP

+91 8218875959 shekharkashyap913@gmail.com linkedin.com/in/shekhar0165 github.com/Shekhar0165
Mohali, Punjab, India

Education

CGC University

Bachelor of Technology in Computer Science & Engineering

Mohali, Punjab

Aug 2023 – Aug 2027

- Currently in 3rd Year
- Relevant Coursework: Data Structures & Algorithms, Web Development, Databases, Object-Oriented Programming

Technical Skills

Programming Languages: C++, JavaScript

Backend Technologies: Node.js, Express.js, Nest.js, REST API Development

Frontend Technologies: React.js, Next.js, React Native

Databases: MongoDB

Tools & Platforms: Git & GitHub, WebSocket (Socket.io), Vercel, AWS

Core Competencies: System Design, API Architecture, Database Optimization, Real-time Communication, Problem-Solving

Professional Experience

Backend Developer Intern

Current

Slay (UK-based AI Startup)

Remote

- Developed and maintained RESTful APIs serving production traffic, ensuring high availability and performance
- Optimized database queries and implemented efficient data models in MongoDB for scalable data management
- Collaborated with cross-functional teams in an agile environment to deliver features aligned with business objectives
- Participated in code reviews and contributed to improving system architecture and performance metrics
- Gained hands-on experience with AI-driven product development in a fast-paced startup environment

Projects

Valon - 10-Minute Delivery Platform | Node.js, Express.js, React Native, MongoDB, Socket.io

GitHub

- Architected and developed a complete delivery ecosystem including customer app, delivery partner app, and admin dashboard
- Engineered real-time order tracking and assignment system using WebSocket (Socket.io) for instant updates across platforms
- Built robust backend with Node.js and Express.js handling concurrent requests, user authentication, and order management
- Implemented secure JWT-based authentication and role-based access control for three distinct user types
- Designed scalable MongoDB schema optimizing for read-heavy operations and real-time data synchronization

UnifHub - Automated Resume Builder & Activity Tracker | Express.js, Node.js, MongoDB, Socket.io

GitHub

- Developed automated resume generation system that creates ATS-optimized resumes from user profile data
- Built RESTful APIs for user data management, document generation, and activity tracking with comprehensive error handling
- Implemented real-time activity tracking for college events and achievements using WebSocket connections
- Designed efficient database schema in MongoDB for storing user profiles, activities, and generated documents
- Created analytics dashboard providing actionable insights on user engagement and document performance

Adornage - Social Impact Platform | JavaScript

GitHub

- Built a platform connecting orphans with elderly care homes, bridging generational gaps through technology
- Implemented user-friendly interface for seamless communication between organizations and individuals

Additional Information

Technical Achievements: Successfully deployed multiple production-ready applications on cloud platforms (Vercel, AWS); Experienced in building real-time communication systems; Strong foundation in DSA with problem-solving practice

GitHub: 13+ repositories showcasing various technical projects

Languages: English, Hindi

Availability: Open to relocation and full-time internship opportunities
